

2021 Consumer Confidence Report (CCR)

for the North Rural Water Supply Corporation Public Water System - PWS ID No. TX1820009

for the period of January 1 to December 31, 2021

YOUR DRINKING WATER IS REGULATED AND MEETS OR EXCEEDS ALL FEDERAL and STATE DRINKING WATER REQUIREMENTS: This report is intended to provide you with important information about your drinking water and the efforts made by the City of Mineral Wells to provide safe drinking water. We hope this information helps you become more knowledgeable about what's in your drinking water. For more information regarding this report contact 940-327-0700

EN ESPANOL: Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al teléfono (940) 452-6543.

North Rural WSC purchases water from The City of Mineral Wells. The City of Mineral Wells provides SURFACE water from Lake Palo Pinto, Palo Pinto Creek, and Hilltop Presedimentation Reservoir located in Palo Pinto County, Texas.

Information about your Drinking Water:

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

Microbial Contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic Contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and Herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

Organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

Radioactive Contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the City of Mineral Wells Public Works Department at (940) 328-7777

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800) 426-4791.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Information about Source Water:

The Texas Commission on Environmental Quality completed an assessment of your source water, and results indicate that some of our sources are susceptible to certain contaminants. The sampling requirements for your water system is based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system contact 940-327-0700

Definitions and Abbreviations

The following tables contain scientific terms and measures, some of which may require explanation:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Avg: Regulatory compliance with some MCLs are based on running average of monthly samples.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E.coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectant to control microbial contaminants.

90th Percentile: 90% of samples are equal to or less than the number in the chart.

MFL: million fibers per liter (a measure of asbestos)

mrem: millirems per year (a measure of radiation absorbed by the body)

N/A: not applicable

NTU: nephelometric turbidity units (a measure of turbidity)

pCi/L: picocuries per liter (a measure of radioactivity)

ppb: micrograms per liter (ug/L), or parts per billion - or one ounce in 7,350,000 gallons of water.

ppm: parts per million, or milligrams per liter (mg/L) - or one ounce in 7,350 gallons of water.

ppq: parts per quadrillion, or picograms per liter (pg/L)

ppt: parts per trillion, or nanograms per liter (ng/L)

Treatable Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

2021 WATER QUALITY TEST RESULTS

Disinfectants and Disinfection By-Products	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Chlorite	2021	1.05	0.53 - 1.05	0.8	1	ppm	N	By-product of drinking water disinfection.
Haloacetic Acids (HAA5)	2021	38.8	16.7 - 38.8	no goal for the total	60	ppb	N	By-product of drinking water disinfection.
* The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year '.								
Total Trihalomethanes (TTHM)	2021	65	23.5 - 72.9	no goal for the total	80	ppb	N	By-product of drinking water disinfection.
* The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year '.								

Inorganics Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Barium	2021	0.11	0.11 - 0.11	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Cyanide	2021	60	60 - 60	200	200	ppb	N	Discharge from plastic and fertilizer factories; Discharge from steel/metal factories.
Fluoride	2021	0.5	0.515 - 0.515	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Nitrate (measured as Nitrogen)	2021	0.0311	0.311 - 0.0311	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.

Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Beta/Photon emitters	02/23/2017	6.2	6.2 - 6.2	0	50	pCi/L *	N	Decay of natural and man-made deposits.
* EPA considers 50 pCi/L to be the level of concern for beta particles.								
Uranium	02/23/2017	1.2	1.2 - 1.2	0	30	ug/l	N	Erosion of natural deposits.

Disinfectant Residual	Collection Date	Average Level	Range of Levels Detected	MRDL	MRDLG	Units of Measure	Violation	Likely Source of Contamination
Chloramine	2021	3.6	1.1 - 4.6	4.0	4.0	ppm	N	Water additive used to control microbes.

Turbidity	Level Detected	Limit (Treatment Technique)	Violation	Likely Source of Contamination
Highest single measurement	0.3	1 NTU	N	Soil runoff.
Lowest monthly % meeting limit	100%	0.3 NTU	N	Soil runoff.

Turbidity is a measurement of the cloudiness of the water caused by suspended particles. We monitor it because it is a good indicator of water quality and the effectiveness of our filtration system and disinfectants.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90 th Percentile	No. Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	2020	1.3	1.3	0.058	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	2020	0	15	2	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

TOTAL ORGANIC CARBON (TOC)	The percentage of Total Organic Carbon (TOC) removal was measured each month and the system met all TOC removal requirement set, unless a TOC violation is in the violation section.
-----------------------------------	--

CRYPTOSPORIDIUM MONITORING INFORMATION

In 2021 the City of Mineral Wells tested our raw water monthly for Cryptosporidium, a microbial parasite that may be commonly found in surface water. Cryptosporidium may come from animal and human feces in the watershed. The results of our monitoring detected no cryptosporidium present.

TOTAL COLIFORM: REPORTED MONTHLY TESTS FOUND NO COLIFORM BACTERIA.

FECAL COLIFORM: REPORTED MONTHLY TESTS FOUND NO FECAL COLIFORM BACTERIA.

WATER LOSS ESTIMATE

In the Water Loss Audit submitted to the Texas Water Development Board for the time period of January – December 2021, our system lost an estimated 66,731,000 gallons of water. This calculates to 5.86% loss of total produced water. The TCEQ's acceptable percentage of water loss is 12.00%. If you have any questions about the Water Loss Audit, please call the City of Mineral Wells Director of Public Works, Scott McKennon, at (940) 328-7777.

2021 Consumer Confidence Report (CCR)
for the North Rural Water Supply Corporation - PWS ID No. TX1820009
for the period of January 1 to December 31, 2021

2021 Regulated Contaminants / Lab Results from **North Rural WSC**

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90 th Percentile	No. Site Over AL	Units	Violation	Likely Source of Contamination
Copper	2019	1.3	1.3	0.0742	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems
Lead	2019	0	15	1.2	0	ppb	N	Corrosion of household plumbing; Erosion of natural deposits.

Disinfectant Residual	Date Sample	Average Level	Minimum Level	Maximum Level	MRDL	MRDLF	Units	Likely Source of Contamination
Chloramine	2021	1.625	1.0	3.2	4.0	<4.0	ppm	Disinfectant used to control microbes

Systems must complete and submit disinfectant data on the Disinfectant Level Quarterly Operating Report (DLQOR). On the report, the system must provide disinfectant type, minimum, maximum and average levels.

Disinfectant and Disinfection By-Products	Collection Date	Highest Level Detected*	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Haloacetic Acids (HAA5)	2021	28	16.5 - 37.1	No goal for the total	60	ppb	N	By-product of drinking water disinfection.

*The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year

Total Trihalomethanes (TTHM)	Collection Date	Highest Level Detected*	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Total Trihalomethanes (TTHM)	2021	55	24.9 - 67.4	No goal for the total	80	ppb	N	By-product of drinking water disinfection.

*The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Nitrate (Measured as Nitrogen)	2021	0.0392	0.0383 – 0.0392	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.

TOTAL COLIFORM: REPORTED MONTHLY TESTS FOUND NO COLIFORM BACTERIA.

FECAL COLIFORM: REPORTED MONTHLY TESTS FOUND NO FECAL COLIFORM BACTERIA.

Water Loss Estimate

In the Water Loss Audit submitted to the Texas Water Development Board for the time period of January through December 2021, our system lost an estimated 11,944,900 gallons. This calculates to 14.74% loss of total purchased water. The TCEQ's acceptable percentage of water loss is 12%. If you have any questions about the Water Loss Audit, please call our office at (940)327-0700.
